Dyna-Back Suspenders

This tremendously well-received product established the concept of allowing firefighter motion without relying on full suspender elasticity with all associated problems.

- No More Bunker Bounce
- No Leather To Rot
- Color: Red/Blue
- Forged, Extra Strong Hardware
- Full Motion Without The Problems Of Full Elasticity

Ordering Information

Part No. Description

|--------|--|
| SP-DBC | Dyna-Back suspenders w/circle hardware |
| SP-RQ | Adder for two tone lime/silver Scotchlite® |

Cushioned Reinforced Knees

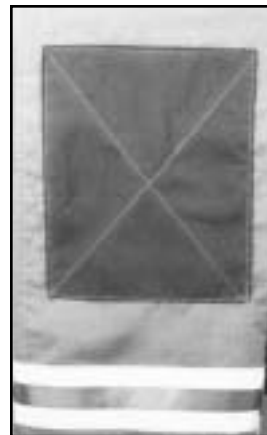

Photo illustrates a khaki Advance knee reinforcement on a PBI outer shell. A reinforced knee is a single layer of the specified reinforcement. A cushioned reinforced knee features both the reinforcing piece and an additional layer of flame resistant cushioning (although for maximum cushioning, the heat channel knee is recommended).

Ordering Information - For Placement on New Pants

Part No. Description

- | | |
|---------|-----------|
| KN-RNC | Sewn-on |
| KN-RNCR | Removable |

Note: Includes frame-on pants and set of pads

Heat Channel Knees

Improves crawling comfort while increasing insulation. The pads hold the firefighters' knees above the kneeling surface, thus minimizing contact with hot embers, super heated surfaces and scalding liquids. Contact us for a listing of materials used on functional face of knee.

Ordering Information

For External Placement on New Pants

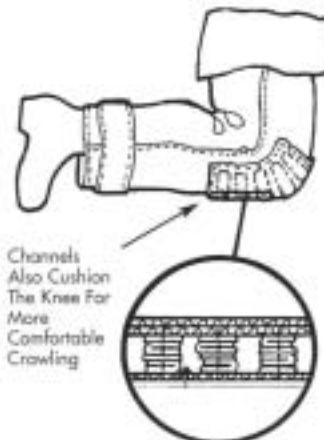

Part No. Description

- | | |
|--------|-----------|
| KN-HC | Sewn-on |

MORNING PRIDE STRUCTURAL STYLE FIRE HELMETS

Very few products can meet the rigorous demands of the firefighting environment. The FYR-Glass shell is a patented composite that is light weight and delivers extreme thermal stability. From New York City to Houston and in thousands of departments across the country, the FYR-Glass Shell is a battle proven success.

Advantages:

- More comfortable and the lowest ride on the market
- Stronger, lighter and less expensive
- Field proven FYR-Glass shell
- Universal Plus/8-Way suspension that is isolated from external exposure
- Ratcheted plus headband adjusts from size 6 to 9-1/2
- Built-in goggle retention system
- Best SCBA interface. No need to adjust suspension
- 5-year unconditional wear life warranty on shell and ratchet
- Lifetime warranty against defects in materials workmanship

MORNING PRIDE USAR, WILDLAND & PROXIMITY HELMETS

USAR

For Technical Rescue Operations the Morning Pride USAR helmets cover all the bases. The NFPA (2001 Edition) compliant USAR helmet is based on Morning Pride's Plus technology. It offers slimmer profiling for maneuvering in tighter spaces.

Features:

- Nomex® quick release postman slide chinstrap
- 8-point ratchet suspension
- 4 - 1" x 4" lime reflexive bars
- Colors: Black (B), White (W), Red (R), Yellow (Y), Orange (O), Blue (U), Green (G)

USAR
Model US PLUS

Wildland

For Wildland Firefighting Operations, the Wild-FYR Standard Brim and Full Brim helmets meet NFPA 1077 (1998 edition). Both use Morning Pride's specially selected Thermo-FRY shell and are available with ear and eye protection for use when operation chainsaws. Various options are available for goggles, faceshields and earflaps. The Wild-FYR is based on proven ANSI Class 1 hard hat technology. No assembly required, caps and hats come ready to wear.

Features:

- Nylon quick release chinstrap
- 6-point ratchet suspension
- Two-way front and rear headband depth adjustment
- Separate rear width adjustment to provide proper fit and comfort
- 4 - 1" x 4" lime reflexive bars
- Colors: White (W), Red (R), Yellow (Y), Orange (O), Blue (U)

Wild-FYR
Full Brim
Model WF PLUS

Proximity

For Proximity Firefighting Operations, the Lite Force Plus modern and the Ben 2 Plus traditional helmets provide all of the improved fit, ride, components and tough FYR-Glass shell all dressed out to meet the NFPA 1976 (2000 edition) performance requirements for proximity / ARFF operations.

Features:

- Nomex® quick release postman slide chinstrap
- Aluminized BPR shroud and helmet cover
- 8-point ratchet suspension
- 6" gold faceshield (non-reflective)
- Standard colors: Yellow on Lite Force and Black on Ben2, other colors available upon request

Lighter than any all leather fire boot

Pro-Warrington has perpetuated its assault on firefighter fatigue with this new series of boots. Weighing in at a mere 5 lbs. per pair (size 9), this series is designed specifically to mitigate firefighter fatigue and, the most common of all fire ground injuries, sprains and strains. Its unique design and unparalleled use of innovative components combine to achieve an unmatched fire-fighting boot. See for yourself how the PRO 4000 series will improve your overall agility, stability and lower leg support.

Features:

- Advance Rip Stock fabric upper reduces weight and weight while increasing breathability
- Constructed of top grade Military AB water resistant leather
- Oblique shaped safety toe cap matches contour of the foot
- Reinforced scuff resistant toe of urethane impregnated leather
- Pull straps are 3/4" wide and fully reinforced
- Vibram® lug soles
- Corrosion resistant - steel ladder shank, and stainless steel puncture resistant bottom plate
- Exclusive bootie package of bacteria resistant Cambrelle® quilted to 7.5 oz 100% Kevlar® felt thermal barrier laminated to full height Crosstech® moisture barrier.
- NFPA 1971 (2000 edition) Compliant

PRO-WARRINGTON™ PRO-HUGGER™ BOOTS

Unlike Any Rubber You've Ever Worked In

An amazing rubber boot with an incredible self-adjusting fit. Widely wear-tested and proclaimed by firefighters as the most comfortable fitting NFPA rubber boot that they have ever worn. PRO has successfully combined the fit synergies of leather and rubber bringing to the fire service the most innovatively designed and comfortable rubber boot on the market. The first and only NFPA 1971 rubber boot deserving of the PRO label - the mark of integrity and excellence in firefighting for over a decade. PRO-Hugger's patented construction has three embedded self-adjusting polymer bands that hug the ankle and foot for an incredible feel and support of a leather boot in a rubber boot design.

PRO-WARRINGTON™ TECHNICAL RESCUE/USAR BOOTS

Rugged, Lightweight Special Operations Boot

Total Fire Group's Research and Development Team, through countless Task Force member interviews and critical trial testing, has created and is now available to the fire service the first ever NFPA 1951 Technical Rescue / USAR boot. A premium boot with unmatched components that distinguishes itself with the use of space-age fabric and components producing the most advanced level of technology and protection available to the Technical Rescue / USAR arm of the fire service.

Features:

- 1-1/2" cushion collar for added comfort and less chafing
- Crosstech® moisture barrier
- Omaha liner for excellent breathability and moisture wicking capabilities
- Upper constructed of full grain impregnated leather and PBO Rip Stop fabric for superb puncture resistance and flame retardancy
- Vibram® lug soles
- Corrosion resistant - steel ladder shank, and stainless steel puncture resistant bottom plate
- Removable and replaceable Dryz™ fabric liner insert controls odor and keeps feet cool and dry
- Composite steel toe eliminates heat and cold conductivity
- NFPA 1951 (2000 edition) Compliant

The Super PASS II™ is the first of the 'Auto On' series of NFPA compliant Personal Alert Safety Systems (PASS) from Grace Industries. The 'Auto On' feature provides the next level of assurance that PASS are not only being worn, but are turned on 'Automatically' when removed from the 'Storage' position.

When removed from the 'Storage' position, the Super Pass II™ Accountability Storage Key will automatically pop off, putting the unit into the 'Sensing Mode' (or ON). When the Super PASS II™ turns ON, a unique series of loud audio tones will be heard. These audio tones indicate initial battery status and are followed by the visual wig-wag display of yellow L.E.D.s.

When there is a lack of motion for approximately 18 to 23 seconds, the unit will go into the "Pre-Alarm" mode and announce an audible "Pre-Alarm" audio signal which becomes progressively louder. The longer the unit is in "Pre-Alarm", the louder the sweeping "Pre-Alarm" signal becomes, signifying the PASS is closer to the full "Alarm" mode.

After a lack of motion lasting approximately 30 to 35 seconds, the unit will go into the "Alarm" mode. When in "Alarm" the "Pre-Alarm" display is replaced by the constant rapid pulsing of four red L.E.D.s, which is accompanied by a loud audio "Alarm" signal that rapidly varies in pitch. This feature is invaluable for recognizing downed firefighters. Once in "Alarm", the unit can be reset by pressing both side buttons simultaneously.

When in the "Sensing" mode, the Super PASS II™ may be put into the "Alarm" mode at any time by manually pressing the "Alarm" button, located on the front surface of the unit. To turn the Super PASS II™ off, simply replace the Accountability Storage Key, thereby returning the unit to the "Storage" position and press both buttons simultaneously.

SUPER PASS II™ is also available with temperature sensing capability. Approximate response times for optional temperature alarm*.

Shown with Accountability Storage Key

Environment Temperature	Alarm Response Time
350° F	6 min.
300° F	8 min.
250° F	10 min.
200° F	12 min.

*Response times listed are approximate due to the variance of environmental factors and the thermal inertia of the heat sensing system.

Specifications

- Dimensions: 2.1" wide x 3.2" high x 1.6" deep
- Weight: 7 oz. with battery (without key)
- Alarm Audio Output: 98+ dBA minimum measured at 10 feet
- Motion Sensor: Solid State Accelerometer
- Case: Rugged, high temperature, impact resistant and translucent polycarbonate plastic
- Sound Discernibility: 6 dBA against background noise
- Battery: 9V alkaline battery (Duracell MN 1604 recommended). Provides up to 300 hours in 'Sensing' Mode
- Certifications: Meets all current NFPA specifications NFPA 1982 (1998 edition); Intrinsically Safe, for use in Class 1, Division 1, Groups A,B,C & D hazardous locations (UL913)

GROVES READY RACK™ GEAR STORAGE SYSTEMS

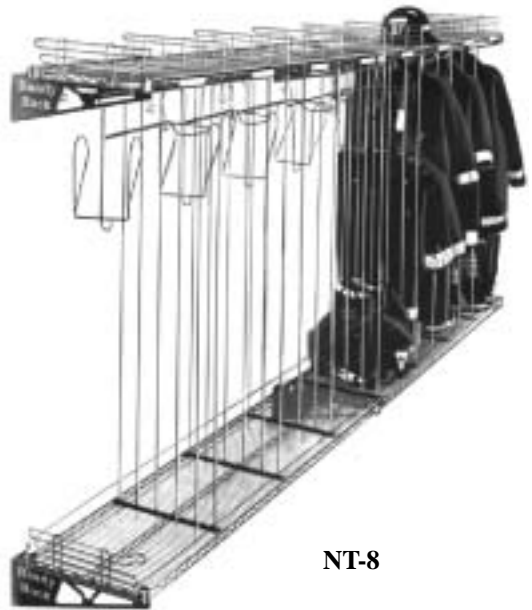

Keep gear ready to go — where you need it, when you need it! Choose from standard units, or customize the installation to fit your station's wall or floor space.

Ready Rack™ requires very little space. Each compartment holds a complete set of turnout gear, including helmet, coat, pants, boots, SCBA mask, and utility items. The exclusive full-length dividers separate each compartment, providing free air flow to personal protective equipment. Dividers can easily be modified to allow for additional personnel or new equipment.

Dry gear helps reduce steam burns to fire and rescue personnel. Garment manufacturers specify quick, open air drying to maintain the protective qualities of fibers and liners. Ready Rack™ provides for free air circulation and helps dry PPE much, much faster.

All standard Ready Rack™ units are chrome plated. Compartments are 18 inches wide and are furnished with one Dry Kwik coat hanger, two utility hooks for bunker pants, and one member name plate.

Dimensions: 21" deep x 72" tall x length specified

DRY KWIK accessories permit inside air circulation for thorough drying of personal protective equipment. Reduces steam burns and maintains the protective qualities of garment fibers.

Dry Kwik Coat Hanger: Opens shoulders and front of coat permitting inside air circulation.

Glove Dry Hanger: Accommodates one pair of gloves or one hood.

Hanging Hook: Ideal for drying bunker pants or storing mask bags and loose equipment.

Flat Dry Hanger: Standard style hanger, with open loop and 1" drop.

Helmet Holder: Relieves pressure from ratchet band, keeps helmet off shelf and allows interior to dry out fast. Helmets last longer.

Dry gear is safer gear. Drygear professional is powerful, efficient and easy to use and it is completely safe for all your gear

Dries coats, bunker pants, boots, helmets & gloves quickly. Better than a tumble dryer for use on your expensive bunker gear. Dries gear from the inside out by forcing gentle warm air through hollow hangers. Available in three to eight stations & is expandable.

- NFPA compliance: Exceeds drying requirements in NFPA 1851, No mechanical action to damage gear, Utilizes forced air ventilation, Runs with or without heat, Built-in overheat protection, Air does not reach gear-degrading temperature.
- More power & increased air for faster drying.
- More efficient hangers with added suspended hooks.
- Fully dry washed Gear in 4-5 Hours.
- Easy access transparent roll-up flap.
- New industrial finish.
- Field expandable.
- Caster option kit for easy movement.
- Tested & Proven in the field since 1992

Specifications:
